REPORT NO.

THIS IS UNEVALUATED INFORMATION

25X1X

On the last of 1953 a betatron of the type from Russia arrived at the Academy Institute for Medicine and Biology in Berlin-Buch. The director of the Institute, Professor Walter Friedrich, had previously applied to the Russians for the delivery of a betatron, after the Russian authorities had given their approval that nuclear research for medical purposes be carried out in the Institute under Friedrich's supervision. It was planned to place the betatron in the same building with a high frequency installation ordered from TRAMO, Dresden (formerly Koch and Sterzel). Since this building was not completed as of mid-July 1953, the betatron from Russia, its numerous parts still wrapped, was stored in a barn located in Berlin-Buch, near the residence of Heerlein (fnu), a member of the purchasing staff of the Institute. 1/

2. Biophysicist Wolfgang Koelle was assigned the task of making the necessary preparations for mounting the betatron and of establishing a laboratory for nuclear - medical research. However, Koelle did not discharge his duties to Friedrich's satisfaction or to the satisfaction of the Russian visitors from Karlsruhe who used to come to the Institute and check on the progress of nuclear-medical research there. He was, therefore, relieved of his duties in the nuclear medical program of the Institute.

25X1A 1/ [] COMMENT: Heerlein meanwhile has left the Institute.
